CP600-P3200 blister line

! When price and performance are a great match

The CP600 blister machine in combination with the P3200, the fastest synchronised cartoner, make up a duo which is unbeatable in terms of price and performance. The line is compact and reliably delivers its promised performance while taking up minimum space. Because of the modest requirement for format parts, follow-on investment is low and predictable.

1 High machine availability (OEE)

Film change without stopping the system: holding stocks of base film in a storage box plus smart control of the machine allows the change to be made without stopping the machines. Using the manual insertion chute, blisters are inserted in gaps on the fly and at full speed. In addition, any residual items can be cartoned at the end of the batch in solo mode.

2 Meeting the highest GMP standards

The separate dosaging area offers a high degree of operator protection from product dust, even in the standard version.

3 Happy machine operators

Mediseal develops its machines with ergonomics in mind. The lidding film can be brought to the machine on a trolley. The cutting and gluing tables are positioned so that the operator can change films easily. Keeping it simple: simple tools and no mechanical adjustments.

4 Easy monitoring of the production process

The continuous transparent housing of the entire line allows the best possible surveillance of the production process. The complete line, including all control systems, can be controlled from a single control panel.

5 Excellent quality

The machine is equipped with a separate discharge for perforation and stamping. Mechanical adjustment of the station is no longer necessary. The highest product quality is achieved even with demanding materials.

6 Fast format changes

Direct product transfer from the CP600 to the P3200 cartoner takes place without fault-prone intermediate stacking units. This reduces the use of format parts to a minimum. The automatic carton height adjustment system also facilitates format changes and a 3-point guide ensures that the cartons are conveyed smoothly.
